DEDICATED TO TECHNOLOGY

For the entire G5 family, dedication to the outdoors and to creating products in pursuit of those passions is much more than a job—it's a way of life. For generations, G5 has been using technology to push the limits of industry standards through rigorous testing of each and every product. If a product is stamped with the G5 logo, its quality and your experience with it will be nothing short of exceptional. At G5, we are Designed To Hunt.

SPIN TESTED

Each and every G5 broadhead is spin tested to insure true flight. True flight breeds confidence, and confidence is what you can expect from G5.

DEPLOYMENT TESTED

Our expandable broadheads go through rigorous testing to make sure that each and every broadhead deploys correctly when that shot of a lifetime presents itself.

STRENGTH TESTED

All G5 broadhead models are put to through the guillotine strength test. Developed to simulate various Kinetic energy needed to penetrate flesh, hide, and bone. We didn't stop there though, penetrating wood, concrete and sheet metal. You can expect devastation when a G5 broadhead is on the end of your arrow.

SHARPNESS TESTED

Nothing short of perfection, G5 utilized LUTZ and diamond cut blades to provide you with devastating wound channels resulting in quick, clean, ethical kills.

YOU ARE ONLY AS GOOD AS YOU CAN MEASURE

Having high standards and low tolerances gives us the advantage to create a premium broadheads. Here at G5 we make sure we can be measured even if we have to create a test for a product that does not exist. Because if you can't be measured ... how good could you really be? Premium products can not be created with out a higher standard.

DEADMEAT

Everything you want in a broadhead! Deadmeat is constructed out of 100% machined steel, with replaceable blades and a barb-less design. The SnapLock blade retention system is super easy to use, just listen for the click and your blades are secured. The barb-less design provides devastating knockdown power with extreme accuracy. If you are looking to put meat in the freezer, then this broadhead is for you!

SNAP LOCK

RETAINING COLLAR

The SnapLock retention collar uses a simple ball in socket design anyone can safely use. With 1 lbs. of pressure to lock the blades, and 3-4 lbs. to expand the blades on impact, the days of questioning mechanical broadheads are no more!

BMP
BALLISTICS MATCH POINT

Ballistics Match Point is designed to mimic every aspect of the actual broadhead, without the devastation to your target. Matched weight distribution, size, and aerodynamics of the actual broadhead allows you to practice with confidence all year.

EASY TO
SHARPEN

This advanced Metal Injection Molding (M.I.M.) technology is used to create a true solid one-piece broadhead. M.I.M. allows us to maximize the function of our broadheads while maintaining our strength and integrity. Used to not only create a true, solid one-piece fixed blade broadhead, but a number of devastating and rugged mechanical ferruls as well.
